

Exhibit "B"

Minimum water level request, starting March 1 and during the remainder of the year.

The Racine County Drainage District requests that during this time period and if there is major rain event that creates a high flow event, the minimum water level is temporarily to be 3.36. An example of the order could read:

Minimum level shall be 4.2 with a maximum of 5.2, and the operator with high flow events (Waterford or Wind Lake dams open) will be allowed to maintain 3.36 for the minimum during the high flow event.

The 3.36 was the minimum water level of the previous DNR operational order of Rochester Dam. This temporary water level will help us to minimize flooding and erosion. It will not only benefit farmland south of Wind Lake, but also residential and businesses north of the dam in the Wind Lake area. It will also benefit property on the Fox River both above and below the Dam at Waterford.
